

Road closed-loop fracture forecasting: integration evidence map

FEM eta0 is the numerical reference. Tooling compatibility is not real-road validation.

PASS: identical analysis/mask/scenario hashes; legacy h1 error = 0; latent-to-sensor leak = 0

NEGATIVE: image-like innovation detects at the hidden support-failure step, not earlier

UNAVAILABLE: calibrated road time, observation-aware h2-h3 performance, uncertainty, hazard and RUL

REALITY GATE: synchronized image + FWD/strain + WIM + environment + maintenance, grouped by road/asset
